Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

- ☐ Other: ____.

DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20 and 44, drawn to a method for fluorescence analysis including predicting of the amount of fluorescent marker in a granular composition, classified in class 435, subclass 4.
- II. Claim 28, drawn to a granulation or coating apparatus, classified in class 422, subclass 50.

The inventions Group II and Group I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the apparatus of Group II may be utilized in the making of any granules or coated granules wherein fluorescence analysis is performed therein without prediction of fluorescent marker amount as in claim 1 or comparison with an unknown granular composition as in claim 44. For example, the analysis optics of the apparatus of claim 28 may merely locate the granular composition being made for production rate determination. Thus, the apparatus of claim 28 can be used in a materially different process from the Group I analysis of fluorescence amount or quality.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
